

ALUMINIUM BASE WITH TWO INTERCHANGEABLE CUTTING LINES

The InBest Pro adds to the equipment an integrated aluminium base with two different cutting positions:

Cutting slot (A): this narrow slot is for general purposes and is used with the standard blade. Rigid and semi-rigid materials such as cardboard, foam board, PVC, honeycomb, acrylic / Plexiglas®, corrugated plastic, passepartout, etc. are cut here.

Cutting base (B): this base is only used with the circular blade. Flexible materials such as textiles, plastic film, banner materials, paper, vinyl, magnetic foils, etc. are cut here.

The cutting position is easily changed in a few seconds by loosening the end knobs and moving the cutting guide assembly.

1. Loosen the locking knob on both sides (C and D).
2. Slide the Inbest forwards or backwards to select cutting line A or B depending on the material to be cut.
3. Tighten the locking knob (C and D) to secure the position.
